

SOD (EC) Antibody

SOD (EC) Antibody, Clone 4GG11G6 Catalog # ASM10101

Specification

SOD (EC) Antibody - Product Information

Application WB **Primary Accession** P08294 Other Accession NP 003093.2 Host Mouse Isotype IgG1 Kappa Reactivity Human, Mouse, Rat, Guinea Pig Clonality Monoclonal Format **ATTO 488** Description Mouse Anti-Human SOD (EC) Monoclonal IgG1 Kappa

Target/Specificity Detects extracellular SOD ~35kDa.

Other Names

EC SOD antibody, EC-SOD antibody, Extracellular superoxide dismutase [Cu Zn] antibody, Extracellular superoxide dismutase [Cu-Zn] antibody, Extracellular superoxide dismutase antibody, Extracellular superoxide dismutase precursor antibody, MGC20077 antibody, SOD 3 antibody, SOD3 antibody, SODE_HUMAN antibody, Superoxide dismutase 3 extracellular antibody

Immunogen Human extracellular SOD purified from aortas

Purification Protein G Purified

Storage Storage Buffer PBS pH7.4, 50% glycerol, 0.09% sodium azide

Blue Ice or 4ºC

-20°C

Shipping Temperature Certificate of Analysis

 $1~\mu\text{g/ml}$ of SMC-167 was sufficient for detection of EC-SOD in 20 μg of human cartilage lysate by colorimetric immunoblot analysis using Goat anti-mouse IgG:HRP as the secondary antibody.

Cellular Localization Extracellular Space

SOD (EC) Antibody - Protocols

Provided below are standard protocols that you may find useful for product applications.

• <u>Western Blot</u>

- <u>Blocking Peptides</u>
- <u>Dot Blot</u>
- Immunohistochemistry
- Immunofluorescence
- Immunoprecipitation
- Flow Cytomety
- <u>Cell Culture</u>

SOD (EC) Antibody - Images

Immunocytochemistry/Immunofluorescence analysis using Mouse Anti-SOD3 Monoclonal Antibody, Clone 4GG11G6 (ASM10101). Tissue: cartilage. Species: Human. Primary Antibody: Mouse Anti-SOD3 Monoclonal Antibody (ASM10101) at 1:1000.

Western Blot analysis of Human cartilage lysates showing detection of SOD3 protein using Mouse Anti-SOD3 Monoclonal Antibody, Clone 4GG11G6 (ASM10101). Primary Antibody: Mouse Anti-SOD3 Monoclonal Antibody (ASM10101) at 1:1000. Left: Control, Middle: Young cartilage, Right: Cartilage sample with osteoarthritis-arthritis..

SOD (EC) Antibody - Background

Superoxide dismutase (SOD) is an endogenously produced intracellular enzyme present in almost every cell in the body (3). It works by catalyzing the dismutation of the superoxide radical O2⁻ to O2 and H2O2, which are then metabolized to H2O and O2 by catalase and glutathione peroxidase (2, 5). In general, SODs play a major role in antioxidant defense mechanisms (4). There are three types of SOD in mammalian cells. One form (SOD1) contains Cu and Zn ions as a homodimer and exists in the cytoplasm. The two subunits of 16 kDa each are linked by two cysteines forming an intra-subunit disulphide bridge (3). The second form (SOD2) is a manganese containing enzyme and resides in the mitochondrial matrix. It is a homotetramer of 80 kDa. The third form (SOD3 or EC-SOD) is like SOD1 in that it contains Cu and Zn ions, however it is distinct in that it is a homotetramer, with a mass of 30 kDA and it exists only in the extra-cellular space (6). SOD3 can also be distinguished by its heparin-binding capacity (1).
