

LigaTrap[®] Chicken IgY Purification Column Product Instructions

Introduction

LigaTrap Technologies now offers our various lines of antibody affinity chromatography resins in a 1 and 5mL prepacked column format for your research and process development needs. LigaTrap Chicken IgY Prepacked Columns are <u>capable of binding ≥ 15 mg monoclonal Chicken IgY /mL Resin</u>. Kappa and Lambda IgY may be purified using this product. LigaTrap Chicken IgY Purification Resin is capable of processing and purifying monoclonal antibodies form cell culture supernatant, ascites fluid, hybridoma, and other sources of recombinant IgY.

Chromatographic Procedure Outline

All buffers can be prepared as shown in **Table 1** below, or can be purchased as pre-qualified buffers from the LigaTrap Technologies website.

Table 1: LigaTrap Chromatographic Buffers and Composition

Part #	Name	Composition	
BU-131-FP	LigaTrap Sample Diluent 2.0	50mg/mL Adipic Acid, 4.0M NaCl, pH 5.8	
BU-132-FP	LigaTrap Equilibration/Wash Buffer 2.0 10mg/mL Adipic Acid, 800mM NaCl, pH 5.8		
BU-123-FP	LigaTrap Elution Buffer0.1M Sodium Acetate, pH 4.0		
BU-124-FP	LigaTrap Regeneration Buffer	ap Regeneration Buffer 0.1M Glycine, pH 2.5	
BU-125-FP	LigaTrap Neutralization Buffer	3.0M Tris-Base, pH 11.1	
BU-126-FP	LigaTrap Storage Buffer	10mM Sodium Phosphate, 0.15M NaCl, 0.05% Sodium Azide, pH 7.2	

Note: Adipic Acid is insoluble at low pH. It will solubilize as the pH increases to > 5.0.

Note: For best results, titrate LigaTrap Elution Buffer with Glacial Acetic Acid.

Note: To limit precipitation of Tris-Base, store LigaTrap Neutralization Buffer at room temperature.

Note: Equilibrate all buffers to room temperature prior to use.

Prepare Sample for Column Loading

- ❖ Add <u>LigaTrap Sample Diluent 2.0</u> to the sample containing Chicken IgY at a ratio of 1:4 (Example: Add 2 mL LigaTrap Sample Diluent 2.0 to 8 mL of sample, or 200 mL to 800 mL of sample, etc...)
- Clarify sample via centrifugation to minimize risk of clogging column with particulate matter.
 - Recommended Speed: 10,000xg for 10-15 minutes.
 - > It may be beneficial depending on sample matrix, to pass material through 0.22-0.45um filter to remove remaining insoluble components.

Connection of Column to Chromatography System

- Ensure not to exceed a maximum pressure of 0.2 MPa (2 Bar)
- To remove cap on outlet side of column, be sure to twist off cap. DO NOT SNAP OFF. Incorrect removal of cap can negatively impact column performance.
- Connect column to system using correct connectors. Make drop-to-drop connection with column using either <u>LigaTrap Storage Buffer</u> or <u>LigaTrap Equilibration/Wash Buffer 2.0</u>.
 - > Recommended flow rate for connection: 0.5-1.0 mL/minute
 - > If using a FPLC system capable of setting multiple pressure alarms, set the pre-column pressure alarm to 0.2MPa.

Table 2. Recommended Flow Rates

Processing Step	Recommended Flow Rate (mL/minute)	
Familianation	1mL Column: 1.0-2.0 mL/minute	
Equilibration	5mL Column: 3.0-5.0 mL/minute	
Compale Lond (March /Flution /Popular analysis of /Comitions	1mL Column: 0.1-0.2 mL/minute	
Sample Load/Wash/Elution/Regeneration/Sanitization	5mL Column: 0.5-1.0 mL/minute	

Removal of Storage Buffer and Column Equilibration

❖ After making connection to system, begin equilibrating with *LigaTrap Equilibration/Wash Buffer 2.0*. Equilibrate the column with at least 10 CV (column volumes) to ensure complete removal of storage buffer.

Application of Sample

❖ Load prepared sample (as described above) over column. For best results allow for residence time of 5-10 minutes to ensure maximum binding of Chicken IgY.

Wash

Following loading of sample, wash the column with 10-15 CV of <u>LigaTrap Equilibration/Wash Buffer 2.0</u>.

Elute

- Elute bound antibody with 5-10 CV of LigaTrap Elution Buffer. For higher concentration elute with 5 CV, but if higher yields are desired, use 10 CV.
 - Make sure to keep track of which elution scheme used for future buffer exchange and/or pH adjustment.
- ❖ Add *LigaTrap Neutralization Buffer* at a volume equal to 15-18% v/v of total elution volume.

Regeneration

Regenerate column with 5-10 CV of <u>LigaTrap Regeneration Buffer</u>.

Re-Equilibration/Storage

- ❖ If more runs are desired, re-equilibrate column with 10 CV of <u>LigaTrap Equilibration/Wash Buffer 2.0</u>, to prepare column for next run.
- If column will not be used for an extended period of time, wash column with 10 CV of <u>LigaTrap Storage Buffer</u> to remove any residual processing buffers. Cap both ends and store at 2-8° C.

Column Maintenance

After extended use, the column may non-specifically bind small amounts of impurities, leading to a loss in column performance. It is recommended that a 0.5M NaOH solution be used for sanitization of the column.

- ❖ Sanitize the column with 10 CV of 0.5M NaOH. **A contact time of 20 minutes is recommended** for sufficient removal of any bound impurities.
 - > **DO NOT** leave column in 0.5M NaOH for extended periods of time, as high pH and corrosive nature of NaOH could negatively impact column performance.
 - ➤ Use at least 10 CV <u>LigaTrap Storage Buffer</u>, to ensure the column is properly neutralized before running chromatographic protocol or storage.

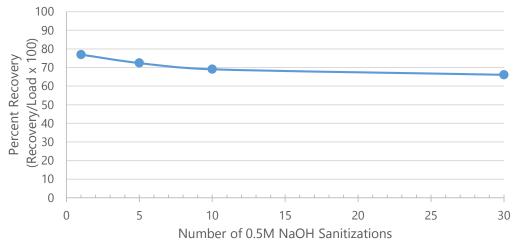

Figure 1: LigaTrap Prepacked Column alkaline stability. Load: <u>15 mg lgY /mL Resin</u>. 0.5M NaOH contact time of 20 minutes per cycle.

Product Specifications

Parameter	LigaTrap Prepacked Column Specification		
Ligand Binding Target	Chicken IgY		
Ligand	LigaTrap Chicken IgY Affinity Ligand		
Binding Capacity	≥15 mg Chicken IgY /mL Resin		
Column Volume	1 or 5 mL		
Column Dimensions	7.4 x 25.3 mm (1 mL Column)		
Column Dimensions	15.8 x 26.2 mm (5 mL Column)		
Recommend Flow Rates	1 mL Column: 0.1 - 2.0 mL/minute		
Recommend flow Rates	5mL Column: 1.0 - 5.0 mL/minute		
Pressure Limit 0.2 MPa (2.0 Bar)			
mU Stability	3-10 Extended Exposure		
pH Stability	1-14 Sanitization		
Townserstown Stability	2 - 42° C		
Temperature Stability	Long Term Storage 2-8° C		
Storogo	2-8°C in 10mM Sodium Phosphate, 0.15M NaCl, 0.05% Sodium		
Storage	Azide, pH 7.2
